

Allocation Policy Memo - Regional Telecom Recovery

Control ID: APM-2026-07-15. Recovery target date: 2026-07-31. This memo is the authoritative source for allocation rules, substitution eligibility, reserve draw exceptions, cost approval thresholds, and policy priority overrides.

Section 1 - Allocation Rules

- Only sites listed in site_priority_plan.csv are eligible for Site Allocation Matrix rows. Items found only in other files must be recorded as exceptions in Unresolved Follow-Ups.
- Allocate physical stock using warehouse_inventory_snapshot.csv. Physical stock on hand is authoritative over ERP available quantity.
- Do not allocate stock below safety reserve unless Section 4 lists a site-specific reserve draw waiver.
- Allocation sequence is P1 before P2 before P3; within each band, lower priority_rank allocates first after applying Section 3 priority overrides.
- A site is Release Ready only if all required SKUs or policy-valid substitutes are allocated from stock or commitments available on or before 2026-07-31 and no higher-priority hold applies.
- Use Carrier Hold when an open carrier exception moves a required SKU or substitute after 2026-07-31.
- Use Supplier Hold when no signed supplier commitment supports availability by 2026-07-31 and no open carrier exception is the controlling blocker.
- Use Substitution Review when a substitute might solve the shortage but eligibility evidence is missing or policy approval is absent.
- Use Cost Approval when site-level incremental cost exposure is greater than USD 5,000 and no waiver is listed in Section 4.
- Use Defer when critical evidence is missing, when no valid supply path exists, or when a referenced site is not present in site_priority_plan.csv.

Section 2 - Substitution Eligibility

Baseline SKU	Approved substitute	Eligibility rule	Additional approval needed
RRU-64T-A	RRU-64T-B	Allowed only when firmware_ready_flag is Yes and site note does not indicate Legacy BBU.	No
CAB-OD-42U	CAB-OD-42U-S	Allowed only when coastal_flag is No. Not allowed for coastal salt-spray zones.	No
PWR-RECT-3K	PWR-RECT-3K-R	Allowed only for sites listed in Section 4 power engineer approval table.	Yes, site must appear in Section 4

FTK-24F	FTK-24F-L	Allowed when cable_tail_m is 15 or greater.	No
CAB-OD-42U	CAB-OD-30U	Not approved for this rollout.	Rejected substitute
RRU-64T-A	RRU-32T-A	Not approved for this rollout.	Rejected substitute

Section 3 - Policy Priority Overrides

Site ID	Original priority source	Policy override	Reason	Resolved priority band/rank
ST-004	site_priority_plan.csv row 5 lists P2 rank 4	Upgrade	Backhaul aggregation site carries three dependent child sites.	P1 rank 4
ST-020	site_priority_plan.csv row 21 lists P1 rank 20	Demote	Access permit not confirmed for July recovery window.	P2 rank 20
ST-014	site_priority_plan.csv row 15 lists P1 rank 14	Keep P1	Emergency services site retains P1 despite later rank.	P1 rank 14

Section 4 - Reserve Draw, Power Approval, and Cost Waiver Decisions

Decision ID	Site ID	Decision type	Scope	Decision
WD-002	ST-002	Reserve draw waiver	FTK-24F	May draw 1 unit below FTK-24F safety reserve for emergency service backhaul.
WD-014	ST-014	Reserve draw waiver	PWR-RECT-3K and FTK-24F	May draw 1 PWR-RECT-3K and 1 FTK-24F below safety reserve if no signed replenishment is available by target.
PA-006	ST-006	Power engineer approval	PWR-RECT-3K-R	Approved substitute, but cost approval still applies if site cost exceeds USD 5,000.
PA-018	ST-018	Power engineer approval and cost waiver	PWR-RECT-3K-R	Approved substitute and incremental cost waiver granted for emergency generator-compatibility issue.
PA-028	ST-028	Power engineer approval	PWR-RECT-3K-R	Approved substitute, but no cost waiver.

Section 5 - Cost Approval Threshold

Any site with incremental cost exposure greater than USD 5,000 must be classified as Cost Approval unless a waiver in Section 4 explicitly removes the hold. Cost exposure must use signed supplier commitments and open carrier exception impacts, not purchase-order snapshot assumptions.
