Page 2 - Open Exception Interpretation Notes

- Use open exception revised ETA when it is later than purchase-order snapshot ETA or signed supplier due date.
- CX-2201 means only existing warehouse stock of RRU-64T-A can support target-date release for P1 sites unless a valid substitute is available.
- CX-2203 means PWR-RECT-3K-R should not support target-ready release despite signed supplier commitment SC-105.
- CX-2204 and CX-2206 mean affected substitute lots are not available for recovery target release.
- CX-2205 must be recorded as an exception because ST-999 is not in site_priority_plan.csv.
